## MEMORANDUM

**To:** Jason Farnsworth, Executive Director  
Platte River Recovery Implementation Program

**From:** Matt Rabbe, U.S. Fish and Wildlife Service  
Wildlife Biologist, Mountain-Prairie Region

**Date:** April 24, 2024

**Subject:** U.S. Fish and Wildlife Service Reporting on 2024 Tiered Platte River Biological Opinions

The U.S. Fish and Wildlife Service (Service) committed, in the Platte River Recovery Implementation Program (PRRIP or Program) Federal Depletions Plan, to provide an annual summary to the Governance Committee (GC) regarding the Endangered Species Act (ESA) Section 7 consultations related to depletions that relied on coverage provided by the PRRIP. Attached is a summary of these consultations completed during the 17th calendar year of the Program, January through December 2024, for distribution to the GC.

### Tiered Biological Opinions

The PRRIP's programmatic biological opinion (BO or opinion) was issued on June 16, 2006. As described in those opinions, subsequent Federal agency activities in the Program area having a federal nexus (both existing and certain new water-related activities) are able to proceed in a streamlined manner and "tier" from the programmatic BO's with regard to addressing their effects on federally-listed species and designated critical habitat in the central and lower Platte River.

The Program Document (page 21) states that "such ESA compliance will continue beyond the first 13 years of the Program provided a subsequent Program increment or First Increment Program extension is adopted pursuant to ESA and National Environmental Policy Act compliance procedures, and, for a subsequent increment or extension, the effects of water-related activities are to be covered under a programmatic BO for that subsequent increment or extension." In 2018, the Service issued a Supplemental Biological Opinion addressing a 13-year Extension to the First Increment. In December, 2019, the 13-year Extension to the First Increment was approved and implementation under this Extension began in January, 2020. Based on the above, each completed BO that tiered from the above-mentioned programmatic BO's includes a statement that re-initiation of consultation will not be required at the end of the first increment or an extension.

The PRRIP Federal Depletions Plan notes that:

“Each state has agreed to work with the DOI and cooperating federal agencies in the process of securing up to 350 acre-feet of water annually, if needed, to offset new federal depletions within the state in a manner consistent with the respective state’s Depletion Plan.”

Federal depletions associated with historic (pre-1997) federal water uses in the Platte River basin are considered automatically covered by the Program, consistent with the Program’s intent to cover historic uses and in recognition of the substantial federal monetary contributions being made toward First Increment implementation.

With regard to new federal water uses in the Platte River basin, the following progress was made in 2024:

Three Federal depletions formal consultations resulting in a tiered biological opinion relying on the PRRIP were completed in 2024. These Projects involved one Federal Depletion in Wyoming, one in Colorado, and one in Nebraska. All three were existing water uses.

#### Tiered-Consultation Activity in 2024

Seven consultations relying on coverage provided by the PRRIP were completed in 2024. Of the seven completed consultations, three were in Wyoming, three in Colorado, and one in Nebraska. All seven consultations completed in 2024 are included in the enclosed master spreadsheet under the applicable year. Of note, two of the consultations were combined into one tiered biological opinion letter but are separated appropriately on the spreadsheet by state and are considered separate projects for their respective state the water use occurred in. There are separate tabs for each state and ordered by date that the BO was issued. Information regarding all PRRIP consultations since PRRIP inception in 2007 is also included. The table provides the following information:

- The Service’s internal Tracking and/or Ecosphere tracking number;
- Lead federal agency;
- County (where applicable);
- Project name;
- Project proponents/beneficiaries;
- Date that the BO was issued;
- Category of the depletion (existing, new, or some combination thereof; and whether the depletion is federal or non-federal);
- Estimated start year of the water use (if a new water-related activity);
- A summary of the corresponding water sources, uses, and depletions if estimated; and
- The offsetting measure(s) used to address depletions.

The information presented in the table is condensed summarized information; more complete information is provided in the corresponding BO. Since PRRIP Implementation began in 2007, a total of 236 tiered formal consultations resulting in biological opinions have been completed (through CY2024) for depletions projects relying on the PRRIP programmatic biological opinion.
