

## Summary of Districts' 2023 AOP

The Districts are in the process of developing a 2023 AOP.

### **Summary of 2022 Operations**

The Districts' non-irrigation season operations were primarily to release water for Central's FERC Diversion Requirements and icing on the NPPD system.

#### **■ Inflows (515,077 af)**

- Non-irrigation season – 80% of 30 year median
- Irrigation season – 41% of 30 year median
- Year total – 66% of 30 year median

#### **■ Outflows (783,011 af)**

- Non-irrigation season – 72% of 30 year median
- Irrigation season – 113% of 30 year median
- Year total – 103% of 30 year median

McConaughy decreased 333,600 acre-feet (17.2 feet) from previous year to end at 652,300 acre-feet.

Central supplied normal 18-inch contracts for 2021. A full irrigation supply on rotational deliveries was made available on all of NPPD's and NPPD's contract canals.

### **2023 Water Supply**

#### **■ Lake McConaughy**

- 652,300 acre-feet
- 61% of the 30 year average carryover
- 37.4% capacity

#### **■ Projected Lewellen Flows**

- Oct-Mar = 319,000 af, 76% of 30 year median
- Oct-Apr = 367,000 af, 76% of 30 year median

## **2023 Plan of Operations**

### Most Likely Operations:

- Release only to meet FERC release requirements.
- Normal irrigation season deliveries.
- Potential release of additional operational flows.

### Other Considerations:

- Outages expected on Central's and NPPD's systems in Fall 2023.
- NPPD is currently in outage on the Keystone Supply Canal.
- Central is currently in outage at Kingsley.
