Executive Director’s Office (EDO)

Jason Farnsworth, ED
Courtney Black
Scott Griebing
Seth Turner
Kevin Werbylo

Contractors

48 **Welcome and Administrative:** *Cory Steinke, WAC Chair*

49 Introductions were made. A request was made to add a choke point update to the agenda.
50 February 2019 WAC minutes were approved with minor edits. Merrill nominated Steinke to
51 continue as WAC chair, second by Shafer. Unanimous approval.

52

53 **WAP Projects and Other Brief Water Updates**

54 ***North Platte Choke Point: Jason Farnsworth, ED***

55 Farnsworth confirmed that there will not be an intentional release from the Lake McConaughy
56 EA to test the choke point capacity and flood stage this year. There have been discussions with
57 the NWS about proceeding to monitor natural event(s) of similar magnitude if they occur.
58 Discussions with CNPPID and others regarding an indemnity agreement related to the choke
59 point test are still ongoing.

60

61 ***Cottonwood Ranch Broad-Scale Recharge: Kevin Werbylo, EDO***

62 Werbylo reported that construction is progressing, but there were significant delays due to winter
63 weather conditions. The substantial completion date was extended by 75 days to July 15, with
64 final completion by August 15. There have been a few minor change orders, but the delays have
65 not resulted in changes in cost, except possibly a bit for additional construction management
66 work. Much of the concrete and riprap work is done. The CNPPID section of the pipeline from
67 Phelps County Canal is complete, with Program sections at Cottonwood Ranch to be started
68 soon. Initial fill of the project may not be until next year.

69

70 ***Lakeside Gravel Pit: Kevin Werbylo, EDO***

71 Werbylo reported that the GC gave the direction in March to finalize the design and have it bid
72 ready but shelve the project until it is clear that the 3,000-AF yield is necessary at the \$10
73 million cost. EDO staff Werbylo and Smrdel will conduct a final bathymetric survey of the pit.

74

75 ***CPNRD Water Leasing: Brandi Flyr, CPNRD***

76 Flyr reported that a continuation of the pilot exchange project is planned for this year. CPNRD
77 has an MOU with the CNPPID to store unused irrigation water in Lake McConaughy, then move
78 that water to the EA at the end of the irrigation season. About 200 fewer acres are participating
79 this year, but the total for the three canals still exceeds 28,000 acres.

80

81 ***NPPD Water Leasing: Jeff Shafer, NPPD***

82 Shafer reported that NPPD is pursuing a similar water exchange project in which lands are not
83 irrigated with surface water and that water is moved to the Lake McConaughy EA. There are
84 6,243 acres enrolled in the project, which would generate a maximum yield of 3,121 AF, subject
85 to finalizing calculations. Agreements with CNPPID have been approved. Farnsworth added
86 that the EDO is working with NPPD on a leasing agreement, hopefully to be ready for the June
87 GC meeting.

88

89

90

91 ***CNPPID Water Leasing (Phelps, Elwood, Irrigators): Cory Steinke, CNPPID***

92 Steinke reported that there were no changes since the last WAC meeting. Winter recharge was
93 maximized, with Phelps operating until the groundwater threshold levels were approached.
94 Diversions into Elwood for recharge continued up to the point that CNPPID needed to reserve
95 the remaining storage capacity for irrigation supplies.

96
97 Farnsworth asked Steinke if the first half payments had been made to those participating in the
98 CNPPID irrigator lease project. Steinke said he would look into it. There was also discussion of
99 possible miscommunications regarding the availability of excess flows in CNPPID's system.
100 Steinke said that CNPPID is meeting with NDNR on Thursday (5/9), with the goal of resolving
101 the issue so that CNPPID can divert excess flows when target flows are met.

102

103 ***Project Scoring: Seth Turner, EDO***

104 Turner reported that the EDO has been working through the score analysis for the CNPPID
105 irrigator lease project. The analysis materials were distributed to the Scoring Subcommittee last
106 week (5/3) for review, and it is anticipated that a conference call with the Scoring Subcommittee
107 will be held in the next two weeks. The intention is to have a recommended score for
108 presentation to the GC in June. After that, the EDO will work with CPNRD and NPPD to
109 develop agreed-upon response functions to use in score analyses for those recharge projects, with
110 the goal of having one analysis complete for the GC in September and the other in December.

111

112 **Colorado Depletions Plan Update: Jojo La, CWCB and Jon Altenhofen, NCWCD**

113 La reported on 2018 water use in the North Platte Basin of Colorado. Two changes to the form
114 were noted: the addition of a new surface water right for wildlife propagation and a spreadsheet
115 correction that resulted in a small change to the baseline consumptive use (CU). Total CU in
116 2018 remained well below the baseline, for an underrun of 23,610 AF.

117

118 Reporting on Colorado's depletion plan for the South Platte Basin, Altenhofen showed that
119 depletions associated with population growth were 2,983 AF at the Colorado-Nebraska state line
120 in May-June 2018. Retimed accretions from managed groundwater recharge were 6,802 AF for
121 the same months. Over the period 2007-2012, average May-June accretions of 5,023 AF exceed
122 depletions of 2,191 AF. Shafer had questions about Colorado's annual increases in transbasin
123 imports since 2009 and requested to see the spreadsheet Colorado uses for the analysis.

124 Altenhofen also reported that the Tamarack I project was credited with 11,512 AF of shortage
125 reduction at the state line in 2018.

126

127 **Nebraska Depletions Plan Update: Jessie Strom, NDNR**

128 Strom presented on 2017 activities under Nebraska's New Depletion Plan, including
129 groundwater transfers, groundwater well permits, groundwater variance permits, and surface
130 water permits both upstream and within the Critical Habitat Reach (CHR). All 19 surface water
131 permits were temporary permits for groundwater recharge upstream of the CHR. The net effects
132 of new depletions and mitigation measures were projected from 2017-2029, with a combined net

133 effect of +97.14 AF upstream and within the CHR. The net effect was also positive for 2006-
134 2017 permitted activities projected through the end of 2019.

135
136 Strom also reported that the NDNR’s Robust Review using the WWUM and COHYST2010
137 models is complete and will be presented to the WAC in August. Development of the second
138 increment Upper Platte Basin-Wide Plan and IMPs will be completed by September.

139
140 Farnsworth noted that two goals that have not been met going into the First Increment Extension
141 are Program water and Nebraska water. He asked whether there will be a new Nebraska
142 depletions document that, for example, eliminates mitigation benefits from the now on-hold J-2
143 Regulating Reservoirs project. Schellpeper said this information will be included as part of the
144 Robust Review presentation in August.

145
146 **Wyoming Depletions Plan Update:** *Jeff Cowley, WY SEO*

147 Cowley presented the Wyoming depletions report for water year 2018. Wyoming continues to
148 comply with all three baselines. In January 2019, Wyoming reported 178,890 acres irrigated
149 above Guernsey Reservoir during the 2018 irrigation season, in compliance with the Modified
150 North Platte Decree and well below the 226,000-acre cap for Baseline No. 1. Wyoming’s total
151 water uses continue to be less than the benchmarks established for Baseline No. 2, with
152 underruns (translated to the state line) of 67,917.37 AF for the irrigation season and 4,808.65 AF
153 for the non-irrigation season. Relative to Baseline No. 3, storage in the South Platte Basin of
154 Wyoming increased by 89.30 AF to a total of 179.32 AF since 1997. Most of these storage
155 facilities are for stock, wildlife, fish, or environmental purposes.

156
157 **Federal Depletions Plan Update:** *Tom Econopouly, USFWS*

158 Econopouly reported that there were eight consultations relying on the PRRIP for ESA
159 compliance in 2018, of which four were in Colorado, one in Nebraska, and three in Wyoming.
160 In addition, four of the eight consultations were for Federal depletions, including for missile
161 access road improvements.

162
163 **Draft 2018 Water Projects Accounting Memo:** *Seth Turner, EDO*

164 Turner presented highlights from the draft accounting memo, which was made available to the
165 WAC for review prior to the meeting. This document is the first attempt by the EDO to
166 document both single-year project operations for all Program water projects and comprehensive
167 accounting since operations began. Differences between project scores and operational yields
168 were emphasized, with time and reduced excess flow availability during the First Increment
169 compared to historical periods being identified as key factors. Turner showed that Program
170 water projects operating in 2018 included the three initial state projects as well as eight Water
171 Action Plan projects. These projects are split between groundwater recharge and contributions to
172 the Lake McConaughy EA. It was noted that the appendices to the accounting memo compile in
173 one place all of the NDNR diversion permits, water service and water leasing agreements,
174 invoice, and other documentation relevant to the operations of Program water projects.
175 Comments on the accounting memo were requested by May 14.

176 La asked if one objective of the memo was to evaluate project effectiveness, and Turner
177 responded in the affirmative. Farnsworth added that it will also help evaluate potential flow
178 management actions. A discussion ensued about why operations numbers might differ from
179 project scores. Shafer suggested that project benefits should be measured not only against target
180 flows but also with the benefit of the species in mind. Altenhofen agreed and stated that for now
181 target flows are how the Program quantifies species benefit. Farnsworth and Griebeling stated that
182 evaluating species benefits will be a major focus of the upcoming adaptive management plan
183 update. Steinke said that he feels the Program is doing all it can to acquire and provide water,
184 given cost and other constraints.

185
186 **Water Operations Model and Adaptive Management Update:** *Scott Griebeling, EDO*
187 Griebeling provided an overview of the April 30 Adaptive Management Working Group
188 workshop, including next steps for the AMP update process and the development of critical tools
189 such as a surface water operations model. La provided additional detail from the discussions
190 during the workshop.

191
192 **Glendo Reservoir Full Utilization Study:** *Bryan Clerkin, WWDO*
193 In response to a request from Shafer last fall, Clerkin provided a summary of the Glendo study,
194 which was completed and presented to the WWDO in March. The concept behind the study was
195 identified in Gov. Mead's 2015 water strategy document, and \$300,000 was allocated to conduct
196 the study. Consultant Riverside (RTi) in Fort Collins was awarded the project, which involved
197 cooperation from the Bureau of Reclamation, the Corps of Engineers, and other agencies.

198
199 A Glendo Reservoir model was developed, and a base scenario was calibrated using 11 historical
200 flood events. The model was limited in scope and did not encompass the full North Platte
201 system, which prompted concern from NPPD. Scenarios were modeled to re-time (not re-
202 allocate) releases from the Glendo flood pool while minimizing impacts to recreation resources
203 at the reservoir. This was essentially a reconnaissance-level study, and the recommendation was
204 to do another study, with a more in-depth look at hydrology and hydraulics.

205
206 **Lake McConaughy EA Releases Update:** *Tom Econopouly, USFWS*
207 Econopouly provided an update on Lake McConaughy EA releases for 2019. In response to the
208 downstream flooding in eastern Nebraska in March, the planned choke point test in May and
209 June was postponed. Planned releases in February through May for channel maintenance, wet
210 meadow recharge, and whooping cranes were also canceled. USFWS would still like to release
211 60,000-80,000 AF this year, with releases still possible between May 11 and September 15 for
212 terns and plovers, as well as May 20 to June 20 for channel maintenance and possibly during the
213 fall whooping crane migration. Econopouly said there remains a 25% chance of not making EA
214 releases this year, in which case the EA volume would be pushing 180,000 AF by May 1, 2020.
215 There was discussion of the potential to evacuate some water from the EA and re-divert it into
216 Program recharge projects. Steinke confirmed the potential to make EA releases into the
217 irrigation season.

218

219 The suggestion was made to consider a summer vegetation inundation release to put some of EA
220 water to use this summer. Econopouly was open to this idea.

221
222 **Additional Business:** *Cory Steinke, WAC Chair*

223 The next WAC meeting is scheduled for August 6.

224

225 **Action Items**

226

227 **General WAC**

- 228
 - Provide comments on the draft accounting memo to Turner by May 14.

229

230 **ED Office**

- 231
 - None.
