

### Platte River Weekly Flow Summary Write-up

Average daily flows in the Associated Habitat Reach (AHR) of the Platte River are currently between about 1,600 and 3,100 cfs. In general, flows in the AHR are receding after peaking near 5,000 cfs in early June. Flows in the South Platte Basin are receding, as well, and are currently below 2,000 cfs. Flow in the North Platte Basin are higher, but are being stored in Lake McConaughy as flows in the North Platte River at North Platte are only about 275 cfs. Almost all canals in the basin are diverting water.
